

Front Mcpherson Suspension Right Lower Swing Arm Assembly Car Chassis Parts

Our Product Introduction

for more products please visit us on auto-partsspare.com

Basic Information

- Place of Origin: zhejiang
- Brand Name: GEELY
- Model Number: 4017031700
- Minimum Order Quantity: 1
- Price: RMB+420+PC
- Packaging Details: carton packaging,size 50*45*15cm
- Delivery Time: 20-30Work days
- Payment Terms: MoneyGram
- Supply Ability: 50000+PC+30day

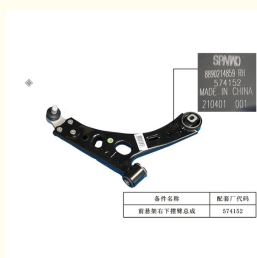

Product Specification

- Attribute: Details
- Processing: Deny
- Type: Mcpherson Suspension
- Inclination: Standard
- Front Bundle: Standard
- Main Tip Rear Inclination: Standard
- Brand Name: Genuine Factory
- Highlight: **Front Suspension Lower Swing Arm, mcpherson Suspension Lower Swing Arm, swing arm front suspension mcpherson**

Product Description

Front suspension right lower swing arm assembly

The main function of the right lower swing arm assembly of the front suspension is to support the body, shock absorption and cushion the vibration in driving, and at the same time play the role of guiding and supporting the suspension.

The main function of the lower right swing arm assembly of the front suspension is to withstand the vertical, longitudinal and lateral forces from the wheels during the driving of the vehicle, and transmit these forces to the frame. It controls the movement trajectory and posture of the wheels through collaborative work with other suspension components to ensure the driving stability, handling and comfort of the vehicle. When the wheel encounters bumps or steering, the lower swing arm will swing up and down and rotate accordingly, so as to adjust the position and angle of the wheel, so that the vehicle can drive smoothly and turn according to the driver's intention. At the same time, the lower swing arm can also absorb and buffer the impact of the road to a certain extent, reducing the vibration transmitted to the car body.

Its features include:1. Structural design: Made of strong metal materials, specific shapes and geometric structures adapt to the installation position and withstand various forces.2. Connection point: It has connection points with the frame, steering knuckles and other components to ensure stable connection and accurate motion transmission.3. Lightweight: Improve the fuel economy and handling performance of the vehicle.

Technical aspects:1. Manufacturing process: Advanced casting, forging and stamping processes are used to ensure the accuracy and quality of the parts. 2. Material treatment: After heat treatment, surface treatment, etc., its strength, wear resistance and corrosion resistance are enhanced.

In a word, the previous suspension right lower swing arm assembly played an important role in the car suspension system, which not only supports the body, shock absorption and cushions the vibration in driving, but also serves as the guiding and supporting role of the suspension to ensure the safety and stability of the vehicle
