

Geely Xingyue L Aftermarket Vehicle Air Conditioning Car AC System 12v

Our Product Introduction

for more products please visit us on auto-partsspare.com

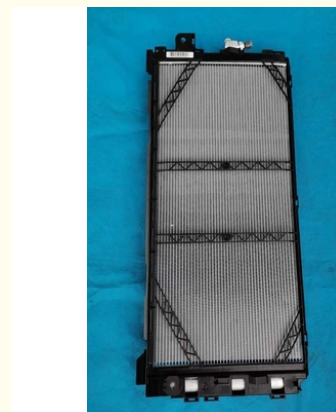

Basic Information

- Place of Origin: China zhejiang
- Brand Name: GEELY
- Model Number: 8890154264
- Minimum Order Quantity: 1
- Price: RMB+400+PC
- Packaging Details: carton packaging,
- Delivery Time: 20-30Work days
- Payment Terms: MoneyGram
- Supply Ability: 50000+PC+30day

Product Specification

- Product Name: Condenser
- Color: Gray
- Application: Air Conditioning
- Package: Cartoon
- Quality: Excellent Quality
- Cat Make: Geely Xingyue L
- Highlight: **Geely Xingyue aftermarket vehicle air conditioning**
, 12v aftermarket vehicle air conditioning,
Geely Xingyue car ac system

Geely Xingyue L condenser

The condenser belongs to the refrigeration system of the car. The main function is to put the heat dissipation of the gas through the compressor into the car, so as to achieve the refrigeration effect. The specific advantages, principle, technology, workmanship, characteristics and functions of Geely Xingyue L condenser are as follows:

Advantages: The heat dissipation of the condenser is greater than the heat absorption of the evaporator, and its function is to complete the heat exchange of the refrigeration system. At present, the main forms of automobile air conditioning heat exchangers are tube plate type, tube belt type and parallel flow type. The structure of the condenser has developed from tubular to tubular, mainly to parallel flow. The internal structure of cascade and parallel flow continues to develop to further improve heat exchange efficiency and reduce weight. The parallel flow condenser has developed from unit parallel flow to multiple parallel flow. By taking measures such as reducing the thickness of the tube section, increasing the inner fins of the tube, cutting the fins, changing the shape of the fins and the opening angle, the heat dissipation area of the fins is increased, and the heat transfer efficiency between the gas side and the liquid side is strengthened.

- **Principle:** The working principle of the condenser of Geely Xingyue L is the same as that of ordinary automobile condenser. It is a heat exchanger that can convert gas or vapor into liquid and quickly transfer the heat in the pipeline to the air near the pipeline. Most cars are placed in front of the water tank. A device that converts gas or steam into liquid.

- **Technology:** Geely Xingyue L may adopt some advanced condenser technologies, such as high-efficiency heat exchange technology, lightweight technology, etc., to improve the performance and efficiency of the condenser.

- **Workmanship:** The workmanship of the condenser is generally fine to ensure its sealing performance and heat transfer efficiency. Geely Xingyue L's condenser may use high-quality materials and advanced manufacturing processes to ensure its quality and reliability.

- **Features:** The car condenser is generally located in the front of the front of the car, which makes it easy to adhere to all kinds of dust and debris leaking through the cracks of the engine cover. For example, willow catkins in spring, etc., attached to the condenser will lead to poor heat dissipation, which will directly cause the air conditioner to not cool, so it should be cleaned up regularly.

- **Function:** The function of the automobile condenser is to dissipate heat and cool the steam of the high-temperature and high-pressure refrigerant discharged by the compressor, so that it condenses into a liquid high-pressure refrigerant. It can cool and liquefy high-pressure and high-temperature gaseous refrigerants sent from the compressor.

product name	condenser
color	gray
application	air conditioning
package	cartoon
quality	excellent quality
cat make	Geely Xingyue L
