

Our Product Introduction

- Place of Origin: China zhajiang
- Brand Name: GEELY
- Model Number: 8031036500742
- Minimum Order Quantity: 10
- Price: RMB+1548+PC
- Packaging Details: carton packaging,
- Delivery Time: 20-30Work days
- Payment Terms: MoneyGram
- Supply Ability: 50000+PC+30day

- Product Name: Driver's Airbag
- Color: Black
- Application: Protection
- Package: Cartoon
- Quality: Excellent Quality
- Car Make: Geely Boyue
- Highlight: **oem geely airbag, eV geely airbag, eV vehicles driver seat airbag**

Product Description

Geely Boyue driver's airbag

Geely Boyue's driver's airbag has the following characteristics:

Process and technology:

- Advanced manufacturing technology and technology are adopted. For example, it may be equipped with Bosch's latest generation of airbag controller AB12, which has higher chip integration and faster computing speed. With the acceleration sensors in the front and sides, the airbag detonation time and the seat belt limit preloading time can be accurately controlled according to the situation when the danger occurs, effectively restrain the occupant and reduce the damage to the occupant during the collision.

Quality and workmanship:

- The quality of the airbag has been strictly controlled and tested to ensure that it can work reliably at critical moments. Its production materials have high strength and durability, and can withstand instantaneous impact and unfold quickly.

Advantages:

- Accurate ignition control: In the process of frontal collision, the front contact sensor can sense the positive impact acceleration signal earlier and faster, providing a timely signal for the airbag controller and achieving accurate ignition time. In the case of side collision, the side collision sensor can also play a similar role, strictly controlling the pre-tightened seat belt of the side system and the ignition moment of the side airbag and side air curtain.
- The perfect combination of pre-tightened seat belts and airbags: In the calibration of the front system, the calibration strategy of pre-tightened seat belts earlier than the ignition of airbags is adopted. The seat belt is on earlier. First, the occupant can be firmly "bundled" on the seat, which is perfectly matched with the subsequent airbag, which greatly improves the protection performance of the system.

Function:

- When the vehicle has a serious collision, the driver's airbag will quickly bounce off, providing important cushioning and protection for the driver's head and chest, and reducing the damage caused by direct impact. In an accident, it can effectively reduce the severity of the driver's injury and may even save lives.

In a word, Geely Boyue's driver's airbag provides reliable security for drivers through advanced technology, technology, high-quality materials and optimized design, which helps to reduce injuries in collisions and protect the safety of drivers' lives.

The safety performance of the vehicle is a comprehensive consideration. In addition to airbags, it also includes body structure, seat belt, brake system and other safety configurations. At the same time, safe driving is always the most important. Only by obeying traffic rules and maintaining good driving habits can we ensure driving safety to the greatest extent.

product name	driver's airbag
color	black
application	protection
package	cartoon
quality	excellent quality
car make	Geely Boyue
