

## Geely Geometry A gray cast iron HT250 silver front brake disc for body parts

Our Product Introduction

for more products please visit us on [auto-partsspare.com](http://auto-partsspare.com)

### Basic Information

- Place of Origin: China zhajiang
- Brand Name: GEELY
- Model Number: 4048070900
- Minimum Order Quantity: 20
- Price: RMB+326+PC
- Packaging Details: carton packaging
- Delivery Time: 20-30Work days
- Payment Terms: MoneyGram
- Supply Ability: 50000+PC+30day

### Product Specification

- Product Name: Front Brake Disc
- Type: Car Body Parts
- Material: Gray Cast Iron HT250
- Color: Silver
- Application: Cooperate With The Brake Pads To Generate Friction And Realize The Deceleration And Braking Of The Vehicle
- Packing: Carton Packaging
- Car Make: Geely Geometry A
- Highlight: silver front brake disc, HT250 front brake disc

## Product Description

### Geely Geometry A gray cast iron HT250 silver front brake disc for body parts

#### Description:

##### I. Materials and processes

The front brake disc of Geely Geometry A is made of high-quality gray cast iron, which has excellent wear resistance and thermal stability.

In the manufacturing process, after precise casting and machining, the smoothness and accuracy of the surface of the brake disc are ensured, laying the foundation for stable and effective braking performance.

##### II. Structure and design

The front brake disc adopts a ventilated structure, which greatly enhances the heat dissipation effect.

The well-designed ventilation channels are distributed on the disk. When the vehicle is braking, it can quickly take away the heat generated by the braking, effectively reduce the occurrence of thermal attenuation, and ensure that the braking performance is still reliable in the case of long-term or high-intensity braking.

##### III. Performance characteristics

The front brake disc of Geely Geometry A has excellent braking performance.

It can quickly respond to the driver's braking operation and provide a strong and uniform braking force, so that the vehicle can safely slow down or stop at a short distance.

At the same time, good thermal recession performance ensures that the braking effect is consistent under various complex road conditions and driving conditions.

##### IV. Reliability and durability

After strict quality testing and durability testing, this front brake disc has excellent reliability.

It can maintain stable performance throughout the service life of the vehicle, reduce the frequency of maintenance and replacement, and save the use cost for the owner.

##### V. Adaptability and compatibility

The front brake disc of Geely Geometry A is perfectly adapted to the braking system of the vehicle, and works with brake pads, brake calipers and other components to form an efficient braking whole.

Its design fully takes into account the overall performance and driving needs of the vehicle, bringing a safe and comfortable braking experience to the driver.

#### Applications:

- Force the vehicle to decelerate or even stop in accordance with the driver's requirements;
- Stabilize the parking of stopped cars under various road conditions;
- Keep the speed of downhill cars stable.

The geometric A front brake system adopts the common form of single-piston calipers and ventilated brake discs. The ventilated brake disc can better dissipate heat during the braking process, reduce thermal attenuation, and ensure the stability of braking performance. Its advantages include good heat dissipation, which can avoid brake failure caused by brake decline when stepping on the brake continuously; the size of the brake disc changes small after heating, which will not increase the stroke of the brake pedal; fast response, high-frequency braking action, which is more in line with the needs of the ABS system; the braking power of the left and right wheels is relatively average.

#### Specifications:

Product name	front brake disc
Type	Car Body Parts
Material	gray cast iron HT250
Color	silver
Application	Cooperate with the brake pads to generate friction and realize the deceleration and braking of the vehicle
Packing	carton packaging
Car make	Geely Geometry A

#### Feature Advantage:

- Ventilated design: It is conducive to heat dissipation, reduces the heat accumulation generated during the braking process, and reduces the possibility of thermal attenuation, so as to ensure the stability and durability of braking performance, and maintain a good braking effect even in the case of frequent braking.
- Single-piston caliper: It provides appropriate braking power and cooperates with ventilated brake discs to meet the braking needs of daily driving and general conditions.

The braking system of the vehicle is essential for driving safety, and the characteristics of the front brake disc help to ensure that it can effectively slow down and stop under various driving conditions.
