

Geely Geometry A plastic or rubber black wheel cover fender is used to block mud.

Our Product Introduction

Basic Information

- Place of Origin: China zhajiang
- Brand Name: GEELY
- Model Number: 5035083400
- Minimum Order Quantity: 30
- Price: RMB+135+PC
- Packaging Details: carton packaging
- Delivery Time: 20-30Work days
- Payment Terms: MoneyGram
- Supply Ability: 50000+PC+30day

Product Specification

- Color: Black
- Material: Plastic Or Rubber
- Type: Car Body Parts
- Application: Block Mud
- Product Name: Wheel Cover Fender
- Package: Carton Packaging
- Function: Block Mud
- Weight: Lightweight
- Highlight: Geely Geometry A fender

Product Description

Geely Geometry A plastic or rubber black wheel cover fender is used to block mud.

Description:

Material and process:

The wheel cover fender of Geely Geometry A is usually made of plastic, which may be engineering plastic. This material has a certain hardness and durability, which can effectively resist the impact of sediment, stones, etc. during the driving of the vehicle. The production process is exquisite and the details are in place, ensuring the quality and service life of the fender.

Appearance design:

The design of the fender matches the overall style of Geely Geometry A. The lines are smooth and the shape is simple and generous. It closely fits the body curve above the wheels, which can not only play a good role in the mud, but also will not affect the overall beauty of the vehicle. Its color is generally black, which is coordinated with the color of the body to make the appearance of the vehicle more consistent.

Dedicated adaptability:

This fender is specially designed for the Geely Geometry A model and has the characteristics of special cars. It can perfectly adapt to the size and shape of the wheel arch of the vehicle. After installation, it is stable and reliable without loosening or shaking. Both the front and rear wheels can be accurately covered and effectively protect the corresponding parts of the body.

Functional features:

The main function is to prevent dirt, sand, rain, etc. from splashing on the body when the wheels rotate, keep the body clean, and reduce the damage to the paint surface. At the same time, it can also block the gravel on the road from hitting the body to a certain extent, reducing the possibility of stones being thrown on the door and causing small pits. During driving, the fender can reduce the erosion of mud and debris on the mechanical structure of the vehicle and protect the normal operation of the pull rod, ball head and other components.

Installation and maintenance:

It is relatively easy to install the Geely Geometry A wheel cover fender, which can generally be fixed in the body position above the wheel by means of screws or buckles. In terms of maintenance, it does not require special maintenance. It only needs to check regularly for looseness or damage, and fasten or replace it in time if necessary.

Product value:

Although the wheel cover fender is a relatively small part, it is of great value to Geely Geometry A. It not only protects the body, prolongs the appearance retention time of the vehicle, reduces the cost of cleaning and maintenance, but also provides a cleaner driving environment for the driver, improving the comfort and pleasure of driving. At the same time, its durable characteristics also ensure the effect of long-term use.

Applications:

1. Prevent dirt from splashing on the body: In the process of driving the vehicle, especially when passing through muddy, water or roads with sand and gravel, the mudguard can block the dirt, sand, rain, etc. splashed by the tire, to avoid them directly staining or damaging the body paint surface, keep the body clean, and reduce the number of car washing.
2. Protect the mechanical structure: prevent sediment from entering the mechanical structure of the vehicle, such as pull rod, ball head, etc., avoid premature rust, and ensure the normal operation of these components.
3. Reduce stone damage: It can reduce the damage to the body of gravel on the road due to the crushing of tires, and reduce the possibility of small pits caused by throwing stones on the door.
4. Improve the aesthetics: keep the appearance of the vehicle clean and more beautiful.

Specifications:

Color	Black
Material	plastic or rubber
Type	Car Body Parts
Application	block mud
Product name	wheel cover fender
Package	carton packaging
Function	block mud
Weight	lightweight

Feature Advantage:

- Excellent material: It is usually made of plastic, which has a certain hardness and durability, and can effectively resist the impact of sediment, stones, etc.
- Appearance matching: The design matches the overall style of Geely Geometry A, with smooth lines and simple shape. It closely fits the body curve above the wheels. While playing the role of mud blocker, it does not affect the overall beauty of the vehicle. The color is generally black, which is coordinated with the color of the body.
- Accurate adaptation: As a fender specially designed for Geely Geometry A model, it can perfectly adapt to the size and shape of the wheel arch of the vehicle. After installation, it is stable and reliable, and will not loose or shake. It can accurately cover the front and rear wheels and effectively protect the corresponding parts of the body.
- Practical function: It can mainly prevent dirt, sand, rain, etc. from splashing on the body when the wheels rotate, keep the body clean, and reduce damage to the paint surface; prevent the gravel from splashing on the road to the mechanical parts of the vehicle, especially the ball head horizontal pull rod, etc., so as to avoid rusting due to impurities in the water; to a certain extent, reduce the road. The gravel flies out of the damage to the car body due to the crushing of the tire, reducing the possibility of small pits thrown on the door.
