

## OEM White Leather Wrapped Steering Wheel Replacement For Geely Geometry A

Our Product Introduction

for more products please visit us on [auto-partsspare.com](http://auto-partsspare.com)

### Basic Information

- Place of Origin: China zhajiang
- Brand Name: GEELY
- Model Number: 8031037400706
- Minimum Order Quantity: 10
- Price: RMB+1846+PC
- Packaging Details: carton packaging,
- Delivery Time: 20-30Work days
- Payment Terms: MoneyGram
- Supply Ability: 50000+PC+30day

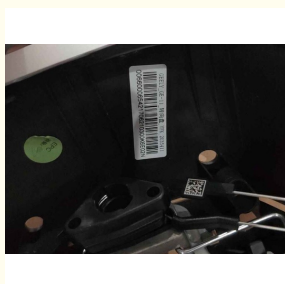

### Product Specification

- Product Name: Steering Wheel
- Material: Leather Materials
- Size: Small
- Color: White
- Quality: Good
- Package: Cartoon Packageing
- Application: Control The Direction
- Style: Elegant And Atmospheric
- Highlight: OEM leather wrapped steering wheel,  
Geely leather wrapped steering wheel,  
Geely steering wheel leather replacement

## Product Description

### Geely geometry A leather white is used to control the direction of the elegant and atmospheric steering wheel

#### Description:

##### I. Unique design, the forefront of fashion

The steering wheel of Geely Geometry A adopts a unique design. The shape of the double-spoke flat bottom not only highlights fashion and dynamism, but also shows the charm of future technology. The combination of its unique lines and geometric elements makes the steering wheel visually impactful and becomes a beautiful scenery in the car.

##### II. Material selection, comfortable touch

In terms of materials, Geely Geometry A provides a variety of options. There is a delicate leather material, soft and elastic, bringing a comfortable grip to your hands; there is also a tough and durable plastic material, which is simple and practical. No matter what kind of material it is, it has been carefully processed to ensure a good handling experience during driving.

##### III. Function integration, convenient operation

The steering wheel is integrated with rich function buttons, including constant speed cruise, multimedia control, etc. These keys are reasonably laid out at your fingertips, so that you can easily operate various functions without distracting when driving. Whether it is adjusting the volume, switching songs, or setting the cruise speed, it can be completed in an instant, which greatly improves the convenience and safety of driving.

##### IV. Flexible adjustment and adaptation to the needs

In order to meet the habits and figures of different drivers, the steering wheel of Geely Geometry A supports four-way angle adjustment up and down. You can easily find the most comfortable driving posture and reduce driving fatigue. The right steering wheel angle not only makes it easier for you to control the vehicle, but also improves the comfort of driving and the accuracy of control.

##### V. Control performance, accurate and sensitive

In actual driving, the steering wheel of Geely Geometry A performed well. Its steering feel is just right, and the damping is moderate. It is neither too light to lose the sense of road, nor is it too heavy to increase the driving burden. The direction is clear, accurate and sensitive, so that you can be confident and enjoy the fun of driving every turn.

#### Applications:

1. Control the direction of the vehicle: This is the most basic function of the steering wheel. The driver controls the steering of the vehicle by turning the steering wheel to realize lane change, turning and other operations.
2. Integrated multiple functional buttons: fixed-speed cruise, adaptive cruise and other functions are usually integrated on the steering wheel, which is convenient for the driver to carry out relevant operations during driving, such as setting the speed, following the car distance, etc., to reduce driving fatigue to a certain extent. Some models also have voice control buttons, which can be used to wake up the voice control system and control most of the software in the system and some vehicle hardware (windows, canopies, air conditioners, etc.) through voice commands. Others also integrate Bluetooth phone function, which is easy to answer and make calls and improve driving safety. In addition, you can also control the relevant settings on the sound system and dashboard, such as adjusting the volume, switching songs, selecting the sound source, viewing the instrument menu, etc.
3. Provide a comfortable grip: The material and design of the steering wheel will affect the driver's grip, and the proper grip will help improve the comfort of driving and the accuracy of control. Some leather steering wheels are soft and elastic, and your hands will not be frozen in winter.
4. Show the vehicle style: the unique double-spoke flat bottom design, with double color matching or light color, etc., has a high appearance, adds a sense of technology and sportiness to the car, and shows the unique style of the vehicle.
5. Adapt to the habits and figures of different drivers: support the four-way angle adjustment of up and down. The driver can find the most comfortable driving posture to reduce driving fatigue, and the right steering wheel angle can make it easier for the driver to control the vehicle and improve the accuracy of control.
6. Display charging status: For example, in some models, the light strip at the "corner of the eye" of the headlights can show the charging status of the vehicle, so that the driver can see how much the vehicle is charged from afar without entering the car to start the vehicle.

#### Specifications:

product name	Steering wheel
material	leather materials
size	small
color	white
quality	good
package	cartoon packageing
application	control the direction
style	elegant and atmospheric

#### Feature Advantage:

- Unique design: It adopts a double-spoke flat bottom design, which is very different from the common three-spoke steering wheel. It not only looks more sci-fi, but also more convenient to use, and this design is relatively rare in this class of models. The steering wheel is small in size and looks unique, and the dark design on the inside is more advanced.
- Excellent material: use genuine leather material, such as nappa leather pattern, skin-friendly and breathable, delicate texture, good comfort, and will not freeze hands in winter.
- Rich functions: the steering wheel is integrated with various buttons such as cruise and multimedia, which are convenient to operate related functions. For example, the left side contains acc switch, speed and follow-up distance setting, voice control system switch, Bluetooth phone, 360 panoramic image switch and other functions; the right side is mainly used to control the sound system. And the relevant settings on the dashboard include multimedia home key, mute key, sound system and dashboard control area, sound source switch key, instrument menu key, etc.

- **Steering feel:** The steering feels good, the damping is appropriate, and the pointing is clear. The steering is light at low speed, and the steering is steady at high speed. The steering feel in sports mode is significantly improved, and the body posture is more flexible and controllable. In addition, the help is multi-stage adjustable, which can adapt to the habits of different drivers.
- **Flexible and accurate:** It only takes one and a half times to kill the steering wheel. The control is relatively flexible. It can basically hit wherever it is. The vehicle response is sensitive, and the virtual position is not obvious.
- **Adjustability:** It supports the four-way adjustment of up and down, which is convenient for people with different figures and driving habits to find the right position, but it needs to be adjusted manually.
- **Space saving:** The bottom of the steering wheel is designed to be straight, which takes up less leg space and allows the driver to move more.
