

## Black White Nylon Steering Driver Seat Airbag Geely Geometry A

Our Product Introduction

for more products please visit us on [auto-partsspare.com](http://auto-partsspare.com)

### Basic Information

- Place of Origin: China zhajiang
- Brand Name: GEELY
- Model Number: 8031037200706
- Minimum Order Quantity: 10
- Price: RMB+1328+PC
- Packaging Details: carton packaging,
- Delivery Time: 20-30Work days
- Payment Terms: MoneyGram
- Supply Ability: 50000+PC+30day

### Product Specification

- Product Name: Airbag
- Color: Black And White
- Material: Nylon
- Package: Cartoon Packageing
- Car Make And Model: Geely Geometry A
- Application: Protect The Driver
- Quality: Good
- Highlight: **Nylon driver seat airbag,  
Steering driver seat airbag,  
Nylon steering air bag**

## Product Description

### Geely Geometry A black and white nylon driver airbag to protect the driver

#### Description:

##### I. The first line of defense for security

The driver's airbag of Geely Geometry A is your loyal guardian during driving. It is always on standby, like a silent guard, ready to stand up in times of crisis.

##### II. Carefully designed and accurately protected

This airbag has been carefully designed, and its shape and unfolding method have been accurately calculated and simulated. When a collision occurs, it can quickly and accurately pop up in front of the driver, forming an effective buffer barrier to minimize the damage caused by the collision to your body.

##### III. High-quality materials, reliable guarantee

It is made of high-quality materials to ensure the stability and reliability of airbags in extreme cases. Whether in the face of a strong impact or a complex collision angle, it can be tough and provide solid support for your safety.

##### IV. Quick response, instant start

Built-in advanced sensing device can sense the occurrence of collision in an instant and start the pop-up program at an amazing speed. At the critical moment, we will strive for valuable living space for you and reduce the risk of injury caused by accidents.

##### V. Perfect integration with the vehicle system

The driver's airbag is perfectly integrated with the entire safety system of Geely Geometry A. Work with seat belts, body structures and other safety components to build an all-round security protection network to protect your every trip.

#### Applications:

The main purpose of Geely Geometry A driver's airbag is to provide the driver with anti-collision protection in the event of a collision with the vehicle to prevent it from colliding with the parts in the car, thus reducing the risk of injury.

When the vehicle is hit to a certain extent, the airbag system will be quickly triggered to inflate the driver's airbag. Its pop-up position is usually in the center of the steering wheel, which can form a buffer barrier in an instant.

Vehicle airbags need to be used in conjunction with seat belts in order to play a protective role more effectively. The seat belt can restrain the occupant's body at the beginning of the collision to prevent it from leaning excessively forward, while the airbag can further cushion the impact of the collision and reduce the damage to the driver's head, chest and other important parts.

Geely Geometry A may be equipped with multiple airbags, such as front double airbags, side airbags, air curtains, etc. These airbags together constitute a more comprehensive safety protection system, which provides protection for people in the car in different directions and positions to reduce the possibility of serious injury in collisions.

#### Specifications:

product name	airbag
color	black and white
material	nylon
package	cartoon packageing
car make and model	Geely Geometry A
application	protect the driver
quality	good

#### Feature Advantage:

- The manufacturer is reliable: its airbags are produced by Otolif, the world's largest airbag manufacturer, and the quality is guaranteed. The brand also supplies airbags for Mercedes-Benz, BMW, etc., which is reassuring.
- Rich configuration: It is equipped with six airbags, including front double airbags, side airbags and air curtains, which can provide anti-collision protection in different positions and reduce the possibility of serious injury to the driver in a collision accident.
- Humanized design: The airbag switch with co-driver's seat can actively turn off the co-pilot's airbag function according to needs to avoid fatal injury caused by airbags to children, which is more considerable.
- Accurate induction: The sensor of the airbag is reasonably distributed, located in the front 2, 2 B-pillars and 2 additional pressure sensors at the front door, which can accurately sense the collision and trigger the airbag ejection in time.
