Geely Geometry A black and white polyester material is used to protect the driver's seat belt

Basic Information

- Place of Origin: China zhajiang
- Brand Name: GEELY
- Model Number: 8040090400B01
- Minimum Order Quantity: 20
- Price: RMB+228+PC
- Packaging Details: carton packaging,
- Delivery Time: 20-30Work days
- Payment Terms: MoneyGram
- Supply Ability: 50000+PC+30day

Product Specification

- Product Name: Seat Belt
- Color: Black
- Material: Polyester
- Type: Car Interior Parts
- Application: Protect The Driver
- Package: Carton Packaging,
- Car Make: Geely Geometry A
- Weight: Lightweight
- Highlight: **Geely Geometry A Seat Belt**

Geely Geometry A black and white polyester material is used to protect the driver's seat belt

Description:

I. Solid protection, accompanied all the way

Geely Geometry A's seat belt is your loyal companion on every trip. It sticks silently and is always ready to stand up for your safety when danger comes.

II. Exquisite material, reliable quality

The seat belt is made of high-quality polyester material, which has excellent strength and wear resistance. Whether it is daily driving bumps or huge pull in an emergency, it can be tough and provide you with stable and reliable protection.

III. Intelligent pre-tightening, intimate protection

The unique intelligent pre-tightening seat belt is a highlight of Geometry A. It can automatically pre-tighten the seat belt when the vehicle starts according to the passenger's figure, ensuring that it always provides the right restraint force during driving. When the risk of collision occurs, it can respond quickly, fix you tightly to the seat as quickly as possible, and minimize the body's forward impulse.

IV. Ergonomics and comfortable experience

While ensuring safety, the seat belt of Geely Geometry A fully takes into account the ergonomic design. The width, curvature and contact with the body of the shoulder strap and belt have been carefully optimized to effectively disperse pressure, and wearing it for a long time will not cause you too much discomfort.

V. Perfect matching, safe integration

The seat belt is perfectly integrated with the overall safety system of the vehicle. Work with airbags, seat structures, etc. to form a comprehensive and rigorous protection network to escort your every trip and make your journey full of peace of mind and confidence.

Applications:

1. Constraint displacement: In the event of a vehicle collision or emergency braking, the driver and passenger are firmly bound to the seat to prevent forward rushing and avoid secondary collision.

2. Cushioning effect: The seat belt can absorb impact energy, resolve inertia, and reduce the degree of injury to drivers and passengers. For example, tighten it in time at the first moment of the accident, "press" the person on the seat, and then relax moderately to avoid hurting people's ribs due to excessive tension.

3. Intelligent pre-tightening: Geometry A is equipped with an intelligent pre-tightening seat belt, which will automatically tighten and close to the body after starting the vehicle and fastening the seat belt. And it can be intelligently adjusted according to the passenger's body to provide more suitable binding force.

4. Vibration warning: When the vehicle's lane departure warning system, the automatic emergency braking system is activated, or the rear collision alarm is triggered, the seat belt will vibrate to remind the driver.

5. Eliminate relaxation: In case of emergency, the active seat belt can eliminate the relaxation of the ribbon, further reduce the displacement of the body, and keep the driver close to the seat to ensure safety.

In a word, seat belts are simple and effective protection equipment in cars, which play a vital role in ensuring the safety of drivers and passengers.

Specifications:

Product name	seat belt
Color	Black
Material	polyester
Type	Car Interior Parts
Application	protect the driver
Package	carton packaging,
Car make	Geely Geometry A
Weight	lightweight

Feature Advantage:

● Intelligent pre-tightening function: When the vehicle starts, it can automatically pre-tighten the seat belt according to the passenger's figure, providing the right restraint force, and fix the driver to the seat with the appropriate seat belt length in the event of a collision to provide better protection.

● Vibration warning function: When the vehicle's lane departure warning system and automatic emergency braking system are activated, or the rear collision alarm is triggered, the seat belt will vibration to remind the driver.

● Ribbon recycling assistance: In case of emergency, it can eliminate the relaxation of the ribbon, reduce the displacement of the body, and make the driver close to the seat.

● Pre-tension and force-limiting design: The front and rear seat belts have pre-tension and force-limiting functions, which can effectively relieve the pressure of the seat belt on the passenger's chest during collision while ensuring safety. In the 40% bias collision test of the 2018 version of C-NCAP test, the back row of Geometry A got a full score, reflecting the good protection of the rear row occupants.

In addition, the design of the Geometry A seat belt also fully takes into account ergonomics. The width, curvature and contact with the body of the shoulder strap and belt have been carefully optimized, and long-term wearing can also reduce discomfort to a certain extent. At the same time, rich safety configurations (such as front and rear seat belt reminder devices, side airbags and air curtains, etc.) also add a lot of points to it.
