

Geely Xingyue I silver-gray fender made of steel plate and aluminum alloy for mud blocking and improving performance

Our Product Introduction

for more products please visit us on auto-partsspare.com

Basic Information

- Place of Origin: China zhajiang
- Brand Name: GEELY
- Model Number: 5035081900C15
- Minimum Order Quantity: 10
- Price: RMB+627+PC
- Packaging Details: carton packaging,
- Delivery Time: 20-30Work days
- Payment Terms: MoneyGram
- Supply Ability: 50000+PC+30day

Product Specification

- Product Name: Fender
- Size: Moderate
- Type: Car Body Parts
- Material: Steel Plate And Aluminum Alloy
- Color: Silver-gray
- Application: Mud Blocking And Improving Performance
- Packing: Carton Packaging,
- Car Make: Geely Xingyue L
- Highlight: Geely Xingyue I fender, Aluminum Alloy fender

Product Description

Geely Xingyue L silver-gray fender made of steel plate and aluminum alloy for mud blocking and improving performance

Description:

Appearance design:

The appearance design of Xingyue L is unique and dignified. The front face adopts a family-style shape, and a lot of chrome-plated design is added to the grille part, with LED high and near light group, which is both atmospheric and delicate. The side design is simple, with chrome strips around the window and the side skirt, and the raised waistline running through the front and rear of the car in the middle, which makes the side layer strong. The interstellar shuttle waistline of the streamlined design of the luxury car, the line to the end, such as the imprint left by the interstellar shuttle, bursts out infinite tension.

Interior decoration:

The interior adopts a simple and atmospheric style, and three 12.3-inch large screens are embedded in the center console, which is full of technology. The car is covered with a large area of soft materials, and the touch feels delicate. With the combination of white and brown, it creates a full sense of luxury and warmth. The vehicle is equipped with Galaxy OS system and Qualcomm Snapdragon 8155 smart chip, which supports voice recognition control, OTA upgrade, Internet of Vehicles and other functions, and is convenient to operate. The moon shadow black interior shows calmness in a low-key way, showing outstanding taste.

Spatial performance:

The body size is 4770mm×1895mm×1689mm, and the wheelbase is 2845mm. It has both a wide body luxury space and a flexible driving experience. There are up to 26 storage spaces in the whole car. Its entry is equipped with a panoramic sunroof, so that the car has a sense of openness. The test found that although the wheelbase of Volvo XC60 is 20mm more than that of Xingyue L, the leg space in the back row of Xingyue L is larger, and the length ratio of the cushion has a good support for the thighs. Even if the seat is adjusted to the lowest level to show Ge You lying state, there is still a considerable margin in the legs, and there is plenty of head space. At the same time, the back row also has a separate automatic constant temperature space, and the design is almost flat in the middle. Even if it is full of three people, it will not be too uncomfortable, which is more in line with the ergonomics of Chinese people.

Power system:

It is equipped with the same 2.0T turbocharged engine as Volvo, with two power modes: low and high. The low-power version has a maximum horsepower of 218 horsepower and a peak torque of 325 Nm, which is matched with a 7-gear wet dual-clutch gearbox; the high-power version has a maximum horsepower of 238 horsepower, a peak torque of 350 Nm, and a transmission system of 8-gear manual-automatic transmission. This power configuration ensures driving performance and excellent fuel economy.

Other highlights:

- Energy matrix headlights: 126 LED lamp beads, double-row three-stage light sources, and high and low-light dual lenses form an energy matrix, always shining ahead.
- 25.6-inch AR-HUD head-up display: real-time projection of driving information on the real-life road ahead, so that you can have a panoramic view of the key points of the road ahead.
- Luxury multi-functional seats: customize the most suitable wrapping and support for everyone, and provide ventilation, heating, welcome and other functions.
- Sound insulation glass: 5mm sandwich PVB glass front row sound insulation glass, double-layer design is safer, effectively blocks external noise, privacy glass reduces direct light, and takes into account driving safety and privacy protection.
- Bose high-precision active noise reduction audio: equipped with 10 high-performance speakers, it creates an immersive listening experience through accurate layout and exclusive customized tuning.
- Fully automatic health air conditioning in the third district: the main and co-driver and the third area in the back row can independently adjust the temperature to meet the needs of different constitutions.
- Intelligent technology: equipped with 25.6-inch imax panoramic triple screen, Qualcomm Snapdragon 8155 flagship chip, 4 sound area 7 microphone full-vehicle voice interaction, etc., supporting local intelligent voice, main driver geek mode, featured speaker, FOTA cloud intelligent upgrade and other functions. It brings an intelligent and convenient interactive experience and the possibility of continuous evolution.

Driving experience:

It's easy to drive. When speeding up in the city, tap the accelerator, the feedback is positive, the engine sound wave also increases, and the speed up in the back section is smooth and comfortable. The driving experience adjusted by the CMA platform emphasizes ease, easy steering and acceleration, and more noise and vibration filtration from the road. Its ACC adaptive endurance has full-speed domain coverage from 0km/h.

Generally speaking, Geely Xingyue L is a cost-effective SUV with excellent appearance design, luxurious interior, rich configuration and abundant power. Although there may be shortcomings in some details, its overall performance is still recognized and loved by many consumers. However, the actual performance of the vehicle may vary according to individual differences. It is recommended to test drive in person before buying a car.

Applications:

- Prevent sand and mud from splashing on the bottom of the car: During the vehicle's driving, the wheels will roll up sand, mud, etc. The fender can play a blocking role and protect the bottom of the car from these debris.
- Improve aerodynamic performance: For example, the 2024 Geely Xingyue L smart engine is specially designed with a vertical diversion groove in the position of the fender on both sides of the lower enclosure, which helps to optimize air flow and improve the aerodynamic performance of the vehicle.
- Enhance the overall effect of the appearance of the vehicle: the design and shape of the fender can be coordinated with other parts of the body, making the appearance of the vehicle more beautiful and smooth.

The fender is the outer plate of the body that covers the wheels. According to the installation position, it can be divided into the front fender and the rear fender. The front fender is installed at the front wheel, and the car manufacturer will verify its design size according to the selected tire number to ensure the maximum limit space when the front wheel rotates and jumps. The rear fender is installed at the rear wheel. Although there is no problem of wheel rotation and friction, due to aerodynamic considerations, the rear fender will show a slightly arched arc. Protruding outward.

Specifications:

Product name	fender
Size	moderate
Type	Type

Material	steel plate and aluminum alloy
Color	silver-gray
Application	mud blocking and improving performance
Packing	carton packaging,
Car make	Geely Xingyue I
