

## Geely Binyue plastic black charging port box with actuator

Our Product Introduction

for more products please visit us on [auto-partsspare.com](http://auto-partsspare.com)

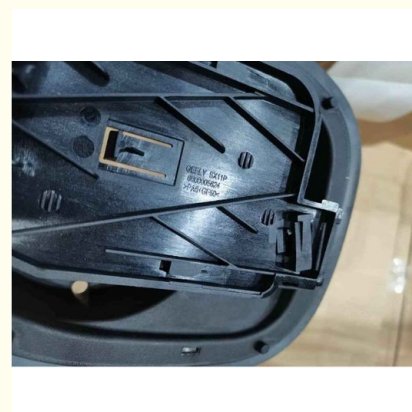

### Basic Information

- Place of Origin: China zhajiang
- Brand Name: GEELY
- Model Number: 5088002800
- Minimum Order Quantity: 20
- Price: RMB+203+PC
- Packaging Details: carton packaging,
- Delivery Time: 20-30Work days
- Payment Terms: MoneyGram
- Supply Ability: 50000+PC+30day

### Product Specification

- Product Name: Charging Port Box With Actuator
- Size: OEM Standard Size,Standard
- Type: Car Body Parts
- Material: Plastic
- Color: Black
- Application: Protect The Charging Port
- Packing: Carton,normal
- Quality: Genuine Product,High Level
- Highlight: **plastic black charging port box,  
Geely Binyue charging port box,  
Binyue charging port box**

## Product Description

### Geely Binyue plastic black charging port box with actuator

#### Description:

Geely Binyue's charging port box with actuator is an important part of the vehicle charging system.

In terms of appearance, the charging port box is integrated with the overall design of the body, and the lines are smooth, which does not affect the beauty of the vehicle. The lid usually has good sealing, which can effectively prevent dust, water and other impurities from entering the charging port.

In terms of material, the charging port box with actuator is generally made of strong and durable materials to ensure stable and reliable operation under various environmental conditions.

The actuator part is the key component to automatically open and close the charging port box. When the vehicle needs to be charged, through the relevant control signals, the actuator can accurately control the opening of the lid of the charging port box, facilitating the insertion of the charging gun. After charging is completed, the actuator will automatically close the lid to protect the charging port.

In terms of operation convenience, this design allows users to manually operate the charging port lid, which simplifies the charging process.

In addition, the charging port case with actuator also has a certain degree of safety. It can ensure that the cover remains tightly closed while the vehicle is driving and prevents accidental opening.

Its internal connection and circuit design have also been carefully considered to ensure the stability and safety of the charging process and avoid problems such as circuit failure or poor contact.

At the same time, Geely Binyue's charging port box with actuator may have undergone strict quality testing in the production and manufacturing process to meet the high-quality requirements of the vehicle.

#### Applications:

The main purpose of Geely Binyue charging port box with actuator is to realize the automatic or manual switch of the charging port cover, making the charging process more convenient.

When the vehicle needs to be charged, through the relevant control signal, the actuator can accurately control the opening of the lid of the charging port box to facilitate the insertion of the charging gun; after the charging is completed, the actuator will automatically close the lid to protect the charging port. This design does not require manual operation of the charging port cover, which simplifies the charging process. At the same time, it can ensure that the lid remains tightly closed during the vehicle's driving to prevent accidental opening.

#### Specifications:

Product name	charging port box with actuator
Size	OEM Standard Size,Standard
Type	Car Body Parts
Material	Plastic
color	Black
Application	Protect the charging port
Packing	Carton,normal
Quality	Genuine product,High Level

#### Feature Advantage:

- Automatic switch function: It can accurately control the opening and closing of the lid of the charging port box without manual operation, making the charging process more convenient.
- Adapt to different opening methods: According to the different opening methods of the car's charging port cover, actuator products with corresponding performance can be provided, such as high speed or high torque.
- Improve the convenience of charging: provide convenience for the insertion and pull-out of the charging gun, and ensure that the lid is tightly closed during the vehicle driving to protect the charging port.
- The potential of integrating specific functions: In the future, it is possible to integrate specific functions required by customers, such as connecting with vehicle intelligent systems, realizing more advanced functions such as automatic charging, and improving the comfort and convenience of driving.
- Reliability: Have a certain reliability to ensure stable work in daily use.
