

Geely Black Automotive Bumper Covers Plastic U Shaped Groove

Our Product Introduction

for more products please visit us on auto-partsspare.com

Basic Information

- Place of Origin: China zhajiang
- Brand Name: GEELY
- Model Number: 6010092000
- Minimum Order Quantity: 10
- Price: RMB+475+PC
- Packaging Details: carton packaging,
- Delivery Time: 20-30Work days
- Payment Terms: MoneyGram
- Supply Ability: 50000+PC+30day

Product Specification

- Product Name: Bumper
- Size: OEM Standard Size,Standard
- Type: Car Body Parts
- Material: Plastic
- Color: Black
- Application: Protect The Car.
- Packing: Carton,normal
- Quality: Genuine Product,High Level
- Highlight: **Geely automotive bumper covers, Plastic automotive bumper covers, Geely bumper cover plastic**

Product Description

The higher the strength of Geely's black bumper is made of plastic to protect the car.

Description:

Material and process: It is made of high-quality plastic material and made by injection molding method, with good toughness and impact resistance.

Appearance design:

- The smooth integration of the overall shape and body lines highlights the sportiness and fashion of the vehicle.
- The front part complements the "Starry Sky Reminiscence" grille or the "Energy Matrix" grille, with design elements such as blackened middle net, red decorative lines and moving front lip, showing a strong visual impact.
- Decorative air guide grooves may be designed on both sides to further enhance the sports atmosphere.

Structural composition: It is composed of outer plates, cushioning materials and beams. The beam is generally made of a cold-rolled sheet with a thickness of about 1.5 mm to form a U-shaped groove. The outer plate and buffer material are attached to the beam and connected to the longitudinal beam screw of the frame, which can be removed at any time.

Function:

- The body on the bumper can play a cushioning role in the collision of the vehicle, absorb and mitigate the external impact, and effectively protect the safety of the vehicle and the personnel in the vehicle.
- Its unique design helps to maintain the original protection function of the vehicle, while pursuing harmony and unity with the body shape, so that the appearance of the whole vehicle is more holistic and beautiful.

Applications:

1. Cushioning and energy absorption: In the case of a slight collision of the vehicle, the body on the bumper can absorb the impact energy and effectively reduce the repair cost of the vehicle. In a serious crash, the impact force can be reasonably directed and distributed to the whole body to avoid excessive deformation in the local area and ensure that passengers have enough living space.
2. Provide air intake: Provide sufficient air intake for the front cabin parts assembly such as air conditioners and condensers to meet the working needs of each component.
3. Decorative vehicle: It is integrated with the shape of the car body to make the appearance of the whole vehicle more holistic and beautiful.
4. Protect the appearance of the car body: For low-speed collisions, it can protect the appearance of the car body and reduce the damage caused by collision to the car body.

Specifications:

Product name	bumper
Size	OEM Standard Size,Standard
type	Car Body Parts
Material	Plastic
Color	Black
Application	protect the car.
Packing	Carton,normal
Quality	Genuine product,High Level

Feature Advantage:

- Appearance design: integrated with the overall shape of the car body, making the appearance of the whole car more holistic and beautiful. For example, it adopts a unique design language, such as the "new generation of energy storm" design, to make the front face of the vehicle more domineering, or through the rising waistline, sharp shape, etc., to show a sense of movement and technology.
- Buffer energy absorption: In the event of a slight collision, it can absorb impact energy, effectively reduce the repair cost of the vehicle, and protect the safety of the vehicle body and the personnel to a certain extent. The side of the metal bar body may have an energy-absorbing structure such as a bow shape.
- Protective effect: For low-speed collision, it can protect the appearance of the car body and reduce the damage caused by the collision to the car body.
- Material and cost balance: Plastic and other materials may be used, which helps to control the cost of the whole vehicle while ensuring a certain strength and protection performance.
