

Integrated Geely Binyue Car Body Parts Plastic Black Rear Bumper Protectors

Our Product Introduction

for more products please visit us on auto-partsspare.com

Basic Information

- Place of Origin: China zhajiang
- Brand Name: GEELY
- Model Number: 6044066100
- Minimum Order Quantity: 10
- Price: RMB+410+PC
- Packaging Details: carton packaging,
- Delivery Time: 20-30Work days
- Payment Terms: MoneyGram
- Supply Ability: 50000+PC+30day

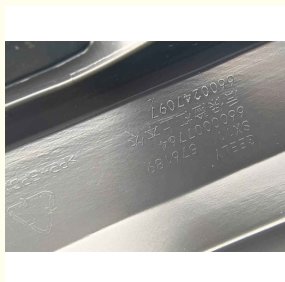

Product Specification

- Product Name: Rear Bumper
- Size: OEM Standard Size,Standard
- Type: Car Body Parts
- Material: Plastic
- Color: Black
- Packing: Carton,normal
- Car Make: Geely Binyue
- Quality: Genuine Product,High Level
- Highlight: **Car Body Parts Plastic bumper, Car Body Parts bumper protectors, Plastic rear bumper protectors**

Product Description

The black rear bumper of Geely Binyue's high-strength plastic material can protect the car.

Description:

In terms of appearance design, it matches the style of the whole vehicle and may adopt a smooth line and curved surface design to enhance the overall beauty of the vehicle. The shape and size of the rear bumper are carefully designed, which can not only protect the rear part of the car, but also form a coordinated proportional relationship with other parts of the body. In terms of material, it is generally made of plastic. This plastic has a low water absorption rate, high impact resistance, rigidity, oil resistance, cold resistance, chemical resistance, and good dimensional stability and anti-aging performance. In terms of function, the rear bumper mainly plays a role in protecting the rear of the car. When the vehicle has a slight collision or scratch, the rear bumper can absorb and cushion a certain impact force to reduce the damage to the rear of the car body. It can effectively protect important components such as taillights and trunks from direct collisions. In addition, the rear bumper of some Geely Binyue models may also have some additional functions or designs. For example, the rear bumper of some models may be integrated with a decorative airflow diffuser, which not only increases the sense of movement and fashion of the vehicle, but also may optimize the air flow at the bottom of the vehicle to a certain extent and improve driving stability. At the same time, devices such as reflectors are also installed on the rear bumper to improve the visibility of the vehicle at night or under low visibility conditions and enhance driving safety.

Applications:

- Protective effect: In the event of a slight collision or scratch, it can absorb and buffer a certain impact force, reduce the damage to the rear part of the car, and effectively protect important components such as taillights and trunk from direct collision.
- Decorative vehicle: Match the style of the whole vehicle to make the appearance of the vehicle more complete and beautiful.
- Optimize air flow: The rear bumper of some models may design some airflow diffusion structures, which can help optimize the air flow at the bottom of the vehicle and improve driving stability to a certain extent.
- Convenient and personalized modification: Its shape is relatively easy to make and can be modified according to personal preferences.

Specifications:

| | |
|--------------|----------------------------|
| Product name | rear bumper |
| Size | OEM Standard Size,Standard |
| Type | Car Body Parts |
| Material | Plastic |
| Color | Black |
| Packing | Carton,normal |
| Car make | Geely Binyue |
| Quality | Genuine product,High Level |

Feature Advantage:

- Appearance design: It matches the style of the whole vehicle, and the shape is smooth, which helps to improve the overall beauty of the vehicle.
- Material characteristics: generally made of plastic material, with low water absorption and good impact resistance, rigidity, oil resistance, cold resistance, chemical resistance, and good dimensional stability and anti-aging performance.
- Protection function: In the event of a slight collision or scratch, it can play a certain cushioning role, reduce the damage to the rear part of the car, and effectively protect important components such as taillights and trunks from direct collision.
- Aerodynamic optimization: The rear bumper of some models may be designed with an airflow diffusion structure, which helps to optimize the air flow at the bottom of the vehicle and improve driving stability to a certain extent.
