Product Description

Geely Binyue's simple and elegant back door combination lamp

Description:

Geely Binyue's back door combination lamp assembly adopts advanced design and high-quality materials, with excellent lighting effect and unique appearance style.

Its lamp group contains multiple functional areas, each of which has its own duties. The brake light part will quickly light up the eye-catching red light when you step on the brake pedal, effectively reminding the rear vehicles to pay attention to maintaining a safe distance and provide an important guarantee for your driving safety.

The taillights are usually lit when the vehicle turns on the wide lights or headlights. The unique light strip design is still clearly recognizable in night mode, which not only increases the recognition of the vehicle, but also shows a fashionable sense of technology.

The turn signal area flashes when you turn, indicating your driving direction for surrounding vehicles and pedestrians, and improving the safety of steering.

The overall shape of the back door combination light assembly is perfectly integrated with the body line, which is smooth and dynamic, which not only enhances the overall beauty of the vehicle, but also highlights the unique style of Geely Binyue.

The combination lamp assembly usually uses LED light source, which has the advantages of low energy consumption, high brightness and long service life. LED lights can provide brighter and more uniform light, giving you a clearer rear view when driving at night or in low visibility conditions.

In addition, Geely Binyue's back door combination lamp assembly also has good waterproofness and durability, which can adapt to all kinds of bad weather and complex road conditions, always maintain stable performance, and escort your travel. Whether on urban roads or highways, it can become a beautiful scenery at the rear of your car and provide a reliable guarantee for your driving safety.

Applications:

1. Profile function: The taillight is a red light. At night or under low visibility conditions, others can judge the width of the car at a distance and increase the visibility of the vehicle.
2. Brake warning: The taillights are on when braking, which makes it easier for vehicles driving behind to find the braking action of the front car and effectively avoid rear-end accidents.
3. Steering instructions: When the yellow light is on, it is used as a turn signal. Turn on the relevant turn signal in advance before the vehicle turns, parallels and starts, which can remind the front and rear vehicles and pedestrians of the driving direction.

Its unique light strip design is still clearly distinguishable in night mode, and the shape has a certain iconicity, which not only enhances the overall beauty of the vehicle, but also improves the recognition of the vehicle. In addition, the back door combination lamp assembly usually uses LED light source, which has the advantages of low energy consumption, high brightness and long service life. It can provide brighter and more uniform light and make the rear vision clearer.

Specifications:

Product name	back door combination lamp
Size	OEM Standard Size,Standard
Type	Car Body Parts
Material	steel and plastic,Plastic,Plastic and glass
Color	white or as requirement
Application	Profile lights, turn signals, brake lights
Packing	Carton,normal
Car make	Geely Binyue

Feature Advantage:

1. LED light source: It has the advantages of low energy consumption, high brightness and long service life. Compared with the halogen lamp source, the LED lamp is brighter and does not require a stabilizer, and the lighting speed is extremely fast. It can provide brighter and more uniform light, make the rear field of view clearer and improve driving safety at night or under low visibility conditions.
2. Unique light strip design: the tail light strip design has a high degree of recognition, the shape is beautiful and fashionable, and it is still clear and recognizable in night mode. The style of the light strip may be iconic, making the vehicle more unique.
3. Integration with body lines: the overall shape and body lines are perfectly integrated, smooth and dynamic, enhancing the overall beauty of the vehicle.
4. Rich functions: including brake lights, taillights, turn signals and other functional areas, each with its own functions. Brake lights can effectively remind rear vehicles to keep a safe distance; turn signals can clearly indicate the driving direction.
5. Good waterproofness and durability: it can adapt to various bad weather and complex road conditions and maintain stable performance.
