

## Geely Binyue's plastic black accelerator pedal is conducive to accurate control of power.

### Our Product Introduction

for more products please visit us on [auto-partsspare.com](http://auto-partsspare.com)

#### Basic Information

- Place of Origin: China zhajiang
- Brand Name: GEELY
- Model Number: 1014025563
- Minimum Order Quantity: 100
- Price: RMB+116+PC
- Packaging Details: carton packaging,
- Delivery Time: 20-30Work days
- Payment Terms: MoneyGram
- Supply Ability: 50000+PC+30day

#### Product Specification

- Product Name: Accelerator Pedal
- Color: Black
- Material: Plastic
- Application: Car Inside,Auto Car
- Type: Car Inerior
- Package: Standard/Protective
- Size: Standard
- Weight: Super Light
- Highlight: accurate control accelerator pedal,  
Geely Binyue accelerator pedal,  
plastic black accelerator pedal

## Product Description

### Geely Binyue's plastic black accelerator pedal is conducive to accurate control of power

#### Description:

The suspension design is adopted, which can provide the driver with a certain space for footsteps and help to control the throttle opening more accurately.

The foot feeling of the pedal is light, which makes it easier to drive in the city, and the driver does not need to spend too much effort to step on the pedal.

In terms of throttle adjustment, there is a certain amount of space in the initial stage, so that the driver can have an adaptive range and avoid the sudden acceleration of the vehicle due to slight foot movements. When the throttle deepens, it is obvious that the power response is more and more positive, which can quickly increase the engine speed and provide a stronger power output for the vehicle.

The characteristics of its acceleration pedal help drivers to better control the acceleration process of the vehicle. Whether it is driving slowly in congested urban conditions or rapidly increasing the speed when it is necessary to overtake quickly, it can provide corresponding operational convenience and accuracy. However, the specific pedal feeling may vary depending on the model configuration and personal driving habits.

#### Applications:

The main function of Geely Binyue acceleration pedal is to control the opening of the engine throttle, so as to control the speed.

When the acceleration pedal is pressed, the opening of the engine throttle increases, the air intake increases, and the amount of oil controlled by the computer increases accordingly, thus increasing the engine speed and the vehicle obtains a stronger power output. In automatic cars, the acceleration pedal is not only used to control the throttle of the engine, but also to pass the driver's intention to the gearbox controller.

Specifically, Geely Binyue's acceleration pedal has the following applications:

1. Realize the acceleration and start of the vehicle: stepping on the acceleration pedal can provide power, so that the vehicle can quickly increase the speed and meet the driver's driving needs under different road conditions, such as overtaking, entering the main road, etc.
2. Maintain a stable speed: By fine-tuning the pedaling degree of the acceleration pedal, the driver can keep the vehicle at the desired speed.
3. Adapt to different driving scenarios: for example, when driving slowly in urban congested conditions, lightly step on the pedal to control the speed; when you need to quickly increase the speed on the highway, increase the pedal strength.

#### Specifications:

Product name	accelerator pedal
Color	Black
Material	plastic
Type	Car Interior
Application	Car Inside,Auto Car
Package	Standard/Protective
Size	Standard
Weight	Super light

#### Feature Advantage:

The suspension design provides a certain amount of foot space for the driver, which helps to control the throttle opening more accurately. The pedal feels light and is suitable for urban driving. The driver does not need to spend too much effort to step on the pedal.

There is a certain amount in the initial stage of throttle adjustment, so that the driver has an adaptation interval to avoid the sudden acceleration of the vehicle due to the slight movement of the foot. When the throttle deepens, the power response becomes more and more positive, which can quickly increase the engine speed and provide a strong power output for the vehicle.

Take Geely's 1.5T version as an example. It is equipped with a 1.5T turbocharged engine with a 7-speed wet dual-clutch gearbox, with a maximum power of 177 horsepower and a maximum torque of 255 Nm. When driving, you can obviously feel the abundant power reserve, and the explosive power when accelerating is direct, which can bring a certain sense of pushing back. With the low sound of the rear exhaust, it is attractive to young consumers.
