

Geely Binyue stainless steel silver front muffler is used for engine exhaust noise reduction

Our Product Introduction

Basic Information

- Place of Origin: China zhajiang
- Brand Name: GEELY
- Model Number: 2061021500
- Minimum Order Quantity: 20
- Price: RMB+316+PC
- Packaging Details: carton packaging,
- Delivery Time: 20-30Work days
- Payment Terms: MoneyGram
- Supply Ability: 50000+PC+30day

Product Specification

- Product Name: Front Muffler
- Color: Silver
- Material: Stainless Steel
- Type: Car Interior
- Application: Car Inside,Auto Car
- Package: Standard/Protective
- Function: Engine Exhaust Noise Reduction
- Car Model: Geely Binyue
- Highlight: **Geely Binyue front muffler, stainless steel front muffler**

Product Description

Geely Binyue stainless steel silver front muffler is used for engine exhaust noise reduction

Description:

Geely Binyue front muffler, carefully designed and of excellent quality.

It adopts advanced manufacturing technology and has the following characteristics:

1. Efficient noise reduction: Through the special internal structure, the noise generated by the engine exhaust is effectively reduced to create a quiet and comfortable driving environment for you.
2. High-quality materials: stainless steel may be selected, which has good corrosion resistance and durability, and can work stably in various harsh environments for a long time.
3. Accurate matching: perfectly match with Geely Binyue's engine and exhaust system to ensure smooth exhaust without affecting engine performance.
4. Compact design: compact structure, installed in the right position at the front end of the vehicle, does not take up too much space, while maintaining the overall beauty of the vehicle.

In actual use, Geely Bin Yueqian muffler can:

1. Significantly reduce exhaust noise, make the vehicle quieter when driving, and improve driving comfort.
2. Ensuring the normal operation of the exhaust system helps to maintain the good performance of the engine.
3. It can withstand the vibration and high temperature of the vehicle and has a long service life.

Whether driving on urban roads or at high speed, Geely Binqian muffler can play an excellent role and bring you a pleasant driving experience. Its stable performance and reliable quality reflect Geely's dedication in details and its pursuit of quality.

Applications:

The main function of Geely Binyue muffler is to reduce the noise generated when the car engine is working.

The principle of a car muffler is to achieve noise reduction through its special internal structure. Geely Binyue's front muffler may consist of two tubes of different lengths, which are separated first and then rendezved. Since the length difference between the two tubes is equal to half of the wavelength of the sound emitted by the car, when the exhaust gas passes through, the two rows of sound waves will interfere with each other and cancel each other when superimposed, thus reducing the sound intensity and reducing the sound transmission to achieve the effect of silence.

At the same time, the front muffler, as part of the exhaust pipe, needs to ensure smooth exhaust, low resistance, and sufficient strength. It needs to withstand higher-temperature exhaust to ensure that it will not be damaged or lose its sound-muffling effect within the specified driving range of the car.

Specifically, mufflers play an important role in reducing intake and exhaust noise. They mainly have two design parameters: transmission loss (TL) and insertion loss (IL). TL refers to the difference in the sound power of the reflected wave entering and leaving the muffler when the muffler terminal is muffler; IL refers to the difference in sound pressure level at a certain point outside the system before and after the muffler is installed.

General mufflers are divided into two different categories: dissipative mufflers and reflective mufflers. Geely Binyue's front muffler may belong to one of them or have both characteristics. The dissipative muffler is usually composed of a pipe and a chamber of lined sound-absorbing material, so that the noise is constantly absorbed and attenuated in the process of propagation, which can effectively reduce medium and high-frequency noise, and the pressure drop of the system is relatively low, but it has a poor effect on sound waves with long wavelengths. The reflective muffler is generally composed of a number of chambers of different volumes and shapes connected by pipes. By constantly reflecting and attenuating the sound waves, it is resistant to high temperature and corrosion, and can work in the impact airflow environment. The price is low and the maintenance cost is low, but in some frequency ranges, the exhaust sound pressure is almost almost attenuated.

In a word, while reducing noise, the Geely Bin Yueqian muffler ensures the normal operation of the exhaust system and the performance of the engine, providing a more comfortable driving environment for the driver.

Specifications:

Product name	front muffler
Color	Silver
Material	stainless steel
Type	Car Interior
Application	Car Inside,Auto Car
Package	Standard/Protective
Function	engine exhaust noise reduction
Car model	Geely Binyue

Feature Advantage:

- High-efficiency noise reduction: Through the special internal structure, the noise generated by the engine exhaust is effectively reduced to create a quiet and comfortable environment for the car. The principle may be to use tubes of different lengths to make sound waves interfere with each other and cancel each other in the process of propagation, thus reducing the sound strength.
- High-quality materials: It may be made of stainless steel, which has good corrosion resistance and durability. It can work stably in various environments for a long time and withstand high-temperature exhaust.
- Accurate matching: It is carefully matched with Geely Binyue's engine and exhaust system to ensure smooth exhaust and does not affect the performance of the engine.
- Compact design: The structure is relatively compact, installed in a suitable position at the front end of the vehicle, does not take up too much space, while maintaining the overall beauty of the vehicle.
