

Geely Binyue's ternary ethylene propylene rubber rear door hole seal

Our Product Introduction

Basic Information

- Place of Origin: China zhajiang
- Brand Name: GEELY
- Model Number: 6073056800
- Minimum Order Quantity: 50
- Price: RMB+60+PC
- Packaging Details: carton packaging,
- Delivery Time: 20-30Work days
- Payment Terms: MoneyGram
- Supply Ability: 50000+PC+30day

Product Specification

- Product Name: Rear Door Hole Seal
- Color: Black
- Material: Ternary Ethylene Propylene Rubber
- Type: Car Interior
- Application: Car Inside,Auto Car
- Package: Standard/Protective
- Function: Protect Car Interior,protect Your Car
- Weight: Super Light
- Highlight: Binyue rear door hole seal

Product Description

Geely Binyue's ternary ethylene propylene rubber rear door hole seal

Description:

Geely Binyue rear door hole seal is an important accessory tailored for Geely Binyue models.

This seal is made of high-quality EPDM material. EDM rubber has good elasticity and anti-compression deformation, and can maintain stable performance under various environmental conditions. It is resistant to aging and ozone, and can adapt to a wide temperature range (usually -40 to 70). At the same time, it also has excellent anti-aging, high and low temperature resistance and chemical resistance.

The design of the seal is exquisite, which perfectly matches the door hole of Geely Binyue. It contains a unique metal fixture and a tongue buckle, which is not only durable, but also conducive to installation.

In terms of function, the seal is mainly used for sealing the door hole area of the rear door. It can effectively fill the gap between the components of the body, and play multiple roles such as shock absorption, waterproofing, dustproofing, sound insulation and decoration. Specifically, it can:

1. Significantly reduce the possibility of external dust and impurities entering the vehicle during driving, and keep the interior environment clean.
2. Effectively block the infiltration of rainwater and avoid moisture in the car.
3. Reduce wind noise and provide a quieter and more comfortable driving environment in the car.
4. Reduce the vibration when opening and closing the door and improve the texture of the door.
5. It plays a certain decorative role in the rear door, making the vehicle more beautiful.

Installing this seal is easy to operate and does not require professional skills. However, when installing, you should pay attention to keep the installation part clean to ensure that the seal can fit tightly.

In a word, with its high-quality materials, careful design and excellent functions, Geely Binyue rear door hole sealing strip provides reliable sealing protection for your car, improving the comfort of driving and riding and the overall quality of the vehicle.

Applications:

1. Shock absorption: Reduce the vibration of the door during vehicle driving and improve the comfort of riding.
2. Waterproof: effectively prevent rainwater from entering the car and avoid moisture in the car.
3. Dustproof: Prevent dust and impurities from entering the car and keep the interior environment clean.
4. Sound insulation: Reduce external noise into the car and create a quieter driving environment.
5. Temperature isolation: It plays a certain role in blocking the temperature inside and outside the car, which helps to maintain the stability of the temperature inside the car.
6. Decoration: Make the appearance of the vehicle more complete and beautiful.
7. Fixed: Make the door more stable when closed, and it is not easy to open easily.

In a word, the rear door hole seal has an important role in the sealing, noise reduction, shock absorption, protection and appearance of Geely Binyue. It can improve the comfort of driving and ride, protect the parts in the car from erosion of dust, water, etc., and also improve the overall quality of the vehicle to a certain extent. The seals of different models may vary depending on the design and configuration.

Specifications:

Product name	rear door hole seal
Color	Black
Material	ternary ethylene propylene rubber
Type	Car Interior
Application	Car Inside,Auto Car
Package	Standard/Protective
Function	protect car interior,protect your car
Weight	Super light

Feature Advantage:

1. Good elasticity and anti-compression deformation: it can maintain stable performance in long-term use, is not easy to deform, and ensures a close fit between the door and the body.
2. Effective sealing: It can fill the gap between the door and the body, play a good role in shock absorption, waterproof, dustproof, sound insulation and heat insulation, reduce the transmission of vibration and noise during driving into the car, and prevent dust, rainwater, etc. from entering.
3. Aging resistance: It has excellent anti-aging ability, can withstand long-term sun exposure, high and low temperature and other environmental tests, and extend the service life.
4. High and low temperature resistance: Maintain its sealing performance in a wide temperature range (usually -40 to 70), whether it is cold winter or hot summer, it can function normally.
5. High matching: specially designed for Geely Binyue models, which accurately matches the shape and size of the rear door hole, and is beautiful and stable after installation.
6. Easy to install: Professional skills are usually not required, and it is convenient for car owners to install by themselves or in car repair shops.

Some car owners may choose to install their own sealing strips to further improve the sealing effect, such as reducing wind noise and preventing dust from entering the cracks of the door. However, it should be noted that if it is not installed properly, it may affect the normal closing of the door or cause the seal to fall off easily. When installing seals, you should ensure that the installation part is clean and firmly pasted, and avoid affecting the opening and closing of the door and the appearance of the vehicle.
