

## Geely Car Body Parts High Definition Reversing Camera Dustproof Waterproof

Our Product Introduction

for more products please visit us on auto-partsspare.com

### Basic Information

- Place of Origin: China Zhejiang
- Brand Name: GEELY
- Model Number: 1017016769
- Minimum Order Quantity: 50
- Price: rmb+200+pc
- Packaging Details: carton packaging,
- Delivery Time: 20-30Work days
- Payment Terms: MoneyGram
- Supply Ability: 50000+PC+30day

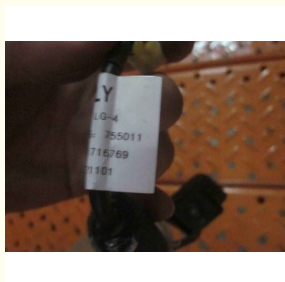

### Product Specification

- Product Name: High-definition Reversing Camera For Geely Cars With Dustproof And Waterproof Performance
- Size: Standard
- Type: Car Body Parts
- Material: Plastic
- Color: Black
- Application: Expand Your Horizons
- Packing: Carton,normal
- Quality: Genuine Product,High Level
- Highlight: **Geely Car Body Parts,  
Car Body Parts Reversing Camera,  
Waterproof car reversing camera**

## Product Description

### High-definition Reversing Camera for Geely Cars with Dustproof and Waterproof Performance

#### Description:

##### I. High-definition picture quality

This reversing camera for Geely cars has amazing high-definition picture quality, which can provide you with clear and delicate images. Its resolution reaches [X]p. Compared with ordinary cameras, the clarity of the picture is greatly improved, so that you can observe the rear environment of the car more clearly when reversing, and effectively avoid scratches and other accidents caused by blurred vision.

##### II. Super wide angle

It has a super-large wide angle with [specific angle], which provides a wider field of view than the original car camera. This means that you can see more rear areas of the car and reduce blind areas. Whether it is roadside obstacles or low objects, you can have a panoramic view and further improve the safety of reversing.

##### III. Dustproof and waterproof performance

The camera has excellent dustproof and waterproof hardware functions, reaching the IP67 level. The IP67 standard defines the protection ability of an interface against liquid and solid particles, in which the number "6" indicates that dust is imprisoned, and the dust cannot enter the entire diameter of the object cannot exceed the gap of the shell; the number "7" indicates that it is short-term immersion, that is, at room temperature and pressure, when the shell is temporarily immersed in water at a depth of 1 meter. It will not have harmful effects. Whether it is stained with water during daily car washing, washed by rainstorms, or even the invasion of dust, it will not cause damage to the reversing camera and will always maintain its normal work.

##### IV. Special car customization

It is a product specially customized for the original factory of Geely Automobile. It is small and beautiful in appearance and perfectly matches the vehicle. When installing, there is no need to worry about damage to the original car. It supports non-destructive installation, which is easy and convenient, and does not damage the overall style of the original car.

##### V. A wide range of applicable models

It is suitable for a variety of Geely models, such as [specific model 1], [specific model 2], etc., providing reliable reversing assistance solutions for the majority of Geely car owners. However, it should be noted that the cameras of different models may vary slightly. When purchasing, please be sure to choose carefully according to your model to ensure compatibility and the best use effect.

##### VI. Stable and reliable performance

Made of advanced electronic technology and high-quality materials, with strong seismic strength, can maintain a stable working state during vehicle driving. Its scanning frequency is accurate and the video signal transmission is stable, ensuring that the images on the display screen are real-time and clear, providing a strong guarantee for your driving safety.

#### Applications:

- **Assisted parking:** For example, the 360-degree panoramic image function provides the driver with a panoramic view of the vehicle through multiple cameras around the body, and helps the driver understand the surrounding environment of the vehicle more intuitively, including obstacles, parking space markings, etc., so as to complete the parking operation more safely and conveniently. Some models also have an automatic parking function, and the vehicle computer will adjust the position of the vehicle entering the parking space according to the camera image.
- **Driving record:** Some cameras can undertake the function of a driving recorder, realize the video recording, photography and playback around the vehicle, etc., and record the situation during the driving process, which can be used as evidence in the event of an accident or other situation.
- **Driving assistance:** The camera on the front windshield can be used for lane departure warning, lane keeping and other functions. For example, the lane keeping camera can identify the lane lines of the road, help the vehicle keep driving in the specified lane, and improve driving safety.
- **Eliminate the blind area:** The side blind area imaging system is usually equipped with a camera in the left and right rearview mirrors. The driver can see the dead corner of the side view on the central control screen of the car, which is safer when changing lanes.
- **Intelligent driving:** Some models are equipped with mono-eye or multi-eye cameras, together with relevant chips and systems, can realize high-speed NOA (pilot assisted driving) and other intelligent driving functions, such as automatic lane change overtaking, automatic driving according to navigation, etc. For example, Geely Boyue L realizes intelligent driving in high-speed/elevated scenes through the cooperation of front-view cameras, millimeter wave radar, high-precision maps, etc.
- **Safety monitoring:** After parking, when the car encounters a collision, some monitoring systems can immediately start multi-screen video recording to monitor the car in real time to ensure the safety of the vehicle.

#### Specifications:

Product name	
Size	Standard
Type	Car Body Parts
Material	Plastic
Color	Black
Application	Expand your horizons
Packing	Carton,normal
Quality	Genuine product,High Level

#### Feature Advantage:

- **High-definition picture quality:** For example, the 720p GKUI high-definition reversing camera matched with the Emgrand GKUI F500+ smart car, compared with the original 480p reversing camera, the clarity is improved by 300%, which can provide clear and delicate images, allowing the driver to observe the car more clearly. After the environment, effectively avoid accidents such as scratching. Some driving recorders also support 1080p@30fps specification video recording, such as Boyue L original driving recorder, which can see the front license plate clearly and clearly understand the road conditions ahead. There are also some models equipped with cameras, such as Binyue's 360 panoramic image, which has higher clarity, basically no snowflakes and noise, and distortion is also acceptable.
- **Super wide angle:** The GKUI high-definition reversing camera has a super wide angle of 134°, which provides a wider field of view than the original car's 122°. The lens of the Boyue L driving recorder supports a 120° ultra-wide angle, which means that more content can be seen on both sides of the front windshield and the recorded information is more comprehensive. The horizontal field of view of the binocular camera can reach more than 100 degrees, and the vertical field of view angle can

reach more than 40 degrees.

- Good dustproof and waterproof performance: The dustproof and waterproof hardware function of the GKUI high-definition reversing camera has reached the level of ip67. Whether it is water, rainstorm erosion or dust attack, it can ensure the normal operation of the reversing camera. The Spade car reversing camera adopts a multi-layer waterproof design, which can also be used for high-pressure flushing and immersion waterproofing.
- Special car customization: GKUI high-definition reversing camera is customized by the original special car. It is small and beautiful in appearance, supports non-destructive installation, and perfectly matches the vehicle. Other special driving recorders such as Boyue L and Xingyue L will also be customized according to the original car, which can be adapted to the reserved interface of the original car to achieve wire-free installation, which does not affect the appearance of the vehicle and avoids the safety hazards of broken wire installation.
- Rich functions: Some driving recorders have a parking monitoring function and built-in gravity sensing. When the body encounters a large vibration, it will automatically turn on and record for 30 seconds. Some also support one-click capture, and click the corresponding screen in the recording wizard of the car to take photos. In addition, some models of binocular cameras can provide rich visual, color, lighting and road information, including traffic signal signs, and can also provide accurate static small target detection, distance detection and driveable area detection and other functions to support automatic driving.
- Applicable to a variety of installation devices: some cameras are suitable for a variety of installation types of brand DVDs and independent displays, and the N system has excellent compatibility.
- With reversing reference lines: Some reversing cameras have reversing reference lines, which can make the driver clear about the distance of obstacles and help plan the reversing route.
- Low-light automatic photosensitive and infrared night vision: The camera using low-light automatic photosensitive chip and infrared night vision chip shows obvious night vision effect, such as the Spade car reversing camera, which can improve the safety and convenience of reversing at night.
