Product Description

Geely Geometry C Wheel Eyebrow Factory

The eyebrow of Geely Geometry C refers to the part located between the top of the wheel and the side of the body. Its main function is to play a certain decorative effect to make the vehicle look more sporty and fashionable. At the same time, it can also prevent the stones and mud water splashed by the wheels from causing damage to the body to a certain extent.

Features:

1. Accurate matching of models: the size and shape perfectly match the Geely Geometry C body, and there is no seamless after installation.
2. High-quality materials: high-quality plastic or composite materials are used, with good weather resistance and impact resistance.
3. Fine appearance design: smooth surface, smooth lines, and consistent with the style of the whole car.

Advantages:

1. Good protection performance: effectively prevent stones and mud from splashing on the wheels from causing damage to the body.
2. Improve the beauty of the vehicle: enhance the overall visual effect of the body and make the vehicle more fashionable and sporty.
3. Reliable quality: After strict quality testing, it has a long service life and is not easy to deform or fade.

Principle:

The main principle of the wheel eyebrow is to change the direction of airflow, reduce wind resistance and noise, and block the erosion of the body by external debris by forming a barrier between the top of the wheel and the side of the body.

Technology:

1. Mold manufacturing technology: high-precision mold is used to ensure the size and shape accuracy of the wheel eyebrow.
2. Material processing technology: special treatment of the selected material to improve its performance and durability.

Workmanship:

1. Detailed injection molding process: ensure that the surface of the eyebrows is flawless and the texture is uniform.
2. Accurate installation hole position: easy to install, and firm and stable after installation.
3. Fine edge handling: avoid sharp edges to prevent scratching people or damaging the body.
